

## Freegold Intersects 5 feet grading 57.1 g/t Gold Rob Project, Alaska

**February 7th 2012 (Vancouver, BC)** – Freegold Ventures Limited (TSX: FVL, Frankfurt: FR4N) (“Freegold”) reports the results of its three holes drilled at the Rob Project located in the Goodpaster District, Alaska.

Drilling was aimed at evaluating the bulk tonnage potential of the Michigan area of the project. A total of three holes totaling 2,984 feet were drilled.

Holes 11-01 and 11-03 both intersected anomalous values. Hole # Rob11-02 was particularly encouraging intersecting 57 g/t over 5 feet and 7 gm/t over 11.5 ft with the bottom 30 feet averaging 2.6 gm/t.

This was the first drilling ever done in the Michigan area. The Michigan prospect is hosted in pervasively sericite altered granodiorite with sheeted and stockwork quartz-sulfide-gold veins covering a 2-3 square kilometer area. Other significant targets on the Rob Project include the Grey Lead area previous drilling intersected multiple higher-grade intercepts such as 13 feet averaging 29 gm/t, 14 feet of 8.0 gm/t and 13.5 feet of 20 gm/t. Several other vein structures have been identified in the vicinity of the Grey Lead and Michigan prospect area, some of which have coincident induced polarization anomalies associated with them. Additional exploration is warranted at Michigan, Grey Lead and these other high priority target.

Significant results from the drilling in the Michigan area are reported below:

Hole Number	Depth of Hole	From (ft)	To (ft)	Interval (ft)	Au g/t
Rob 11-02	1078	163	168	5	57.1
		408	419.5	11.5	7.04
		597.5	614	16.5	2.16
		1048	1078	30	2.58

Width refers to drill hole intercepts, true widths have not been determined.

The Qualified Person who has reviewed the technical disclosure contained in this release is Curtis J. Freeman, M.Sc., PGeo who is the primary geological consultant for the project. Drill cores were cut in half using a diamond saw, with one-half placed in sealed bags. Core samples were picked up on-site by Inspectorate Labs and transported to their facility in Fairbanks, Alaska. A sample quality control/quality assurance program was implemented.

### About Freegold Ventures Limited

Freegold is a TSX listed company focused on the exploration of gold projects in Alaska. In addition to the Rob Project, the company is currently drilling on its Golden Summit Project near Fairbanks and has an exploration agreement with option to lease the Vinasale Gold project in central Alaska on which it is currently completing an updated NI 43-101 compliant resource.
